Op Art Line Design with Shading

(15 points)

1. Start by drawing a gently curving line across the paper

2. Add 8 dots across the line. They should be different lengths apart. You need a dot relatively close to the edge of your paper

3. Start connecting the dots with curved lines. The dots close to the edge will go off the paper to an imaginary dot. Don’t cross over any lines, but you can share a line as you begin going up and out. The lines should go off the edge of the paper as you extend outwards. Some sections may shrink as others get bigger- That’s totally ok!

4. Pick a group of colored pencils that look good together. Press harder at the corners and near the center get lighter and lighter.
